

USER MANUAL

NINZYA Calendar

See four months at once and keep a memo for each date

A compact calendar combining a four-month view, plain-text date memos, and the NINZYA Ghost interface

Four-month view

Memo auto-save

Ghost interface

macOS | Version 1.0.0

Getting started

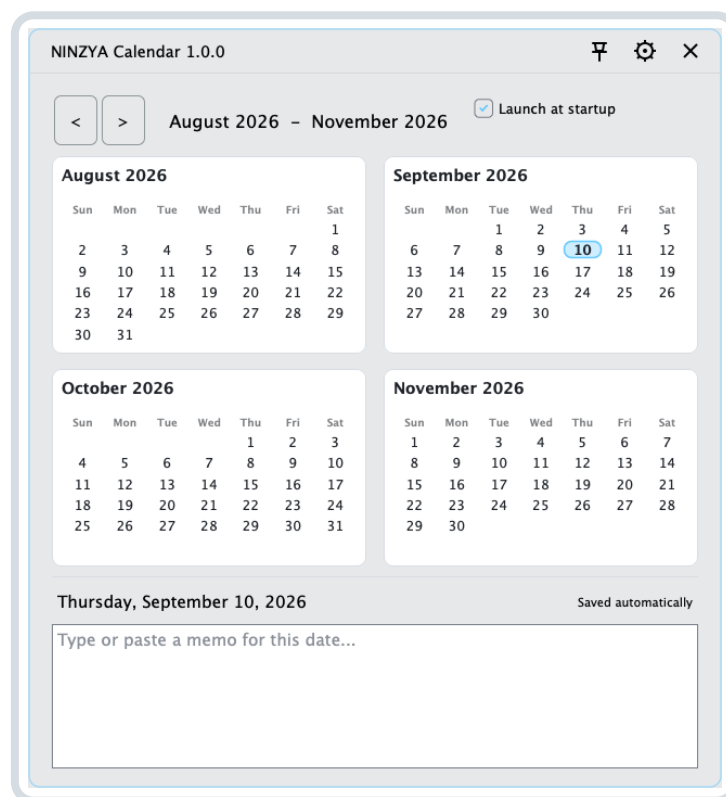

NINZYA Calendar shows the previous month through the month after next and stores one plain-text Memo for each date. It starts directly as a compact Ghost.

Launch on macOS

No installer required

Open NINZYA Calendar 1.0.0.app. You can move it to Applications first. If macOS asks for confirmation, Control-click the app, choose Open, and review the message.

Window layout

The top contains range controls and NINZYA header controls, the centre shows four months, and the bottom contains the selected date and Memo area.

Pin	Keeps the full window visible instead of shrinking automatically.
Gear	Opens Settings; press it again to return to Calendar.
Close	Saves the current Memo and exits the app.
< / >	Moves the complete four-month range by one month.

Navigate months and dates

- At launch, the previous, current, next, and following months are shown.
- Press < or > once to move the complete four-month range by one month.
- Click a date to select it and open its Memo area at the bottom.
- Click the selected date again to close the Memo area; click again to reopen it.
- A date with saved text displays a Memo indicator.

Four-month range

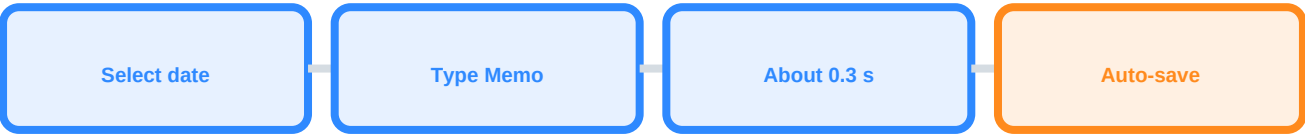

Date selection

The selected date uses the accent background. Today is bold. Dates with a Memo use red in Light Theme and yellow in Dark Theme.

Regular date	Shows the day number.
Today	Uses bold text.
Selected	Uses an accent background and bold text.
Has Memo	Red in Light Theme; yellow in Dark Theme, with an indicator.

Write and save a Memo

Select a date and type plain text in the Memo area. The content saves automatically about 0.3 seconds after typing stops.

Save status

The status reads 'Saving...' while pending and 'Saved automatically' after completion. Changing dates, entering Ghost, and exiting also commit pending text.

Empty Memos

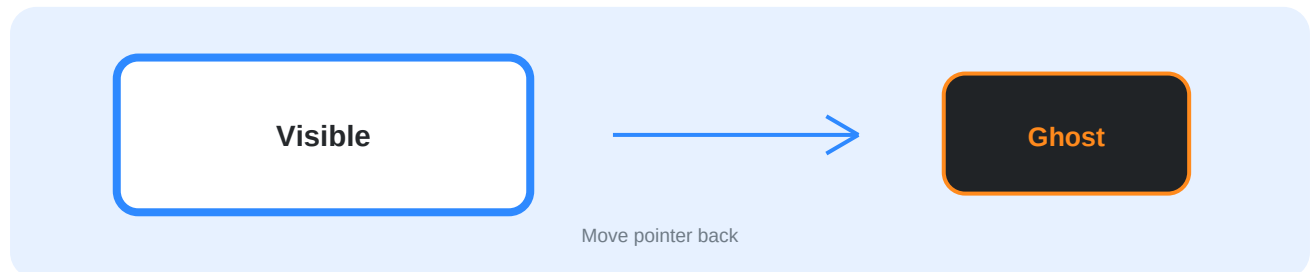

Leaving only whitespace removes that date's Memo data and its indicator.

Memo

Format	Plain text with line breaks, copy, paste, cut, and select all.
Storage unit	One Memo for each date.
Location	~/Library/Application Support/NINZYA/Calendar/memos.json
Restore	Select the same date after relaunch to show its saved Memo.

Ghost and settings

When the pointer leaves the window, NINZYA Calendar shrinks into a compact Ghost. Move the pointer back onto the Ghost to restore the full window.

- Turn on Pin to keep the full window visible.
- Hold Shift while dragging a Ghost to move it. An unmodified drag does not move it.
- Press Command + Shift + G to Ghost all local NINZYA windows.
- If a moved Ghost overlaps another Ghost, the moved one reflows to the nearest free position.
- While another unpinned NINZYA is visible, this Ghost waits instead of opening a second full window.

Settings

Ghost Scale	Ghost size from 10% to 80%.
Border Width	Ghost border width from 1px to 5px.
Label Font Size	Ghost label size from 8px to 28px.
Border / Label	Border and label visibility. Both cannot be off together.
Animation	Enables or disables the Visible / Ghost animation.
Dark Theme	Switches between dark and light themes.
Border Color	Selects the Ghost colour from 12 colours.

Startup, saved state, and help

Launch at sign-in

Enable 'Launch at startup' to start NINZYA Calendar for the current user. It still begins as a Ghost.

Saved automatically

Memos, window position, Visible / Ghost positions, Pin, Theme, and Ghost settings are stored in your macOS Application Support folder.

Common controls

< / >	Move the visible range by one month
Click date	Select date / toggle the Memo area
Shift + drag Ghost	Move a Ghost
Command + Shift + G	Ghost all local NINZYA windows
Command + C / V / X / A	Copy / paste / cut / select all in a Memo

Troubleshooting

Memo does not save	Wait about 0.3 seconds. If Auto-save failed appears, check write access to Application Support.
Memo area is hidden	Click a date. Repeated clicks on the selected date toggle the area.
Window becomes a Ghost	Turn on Pin to keep the full window visible.
Ghost will not move	Hold Shift throughout the Ghost drag.
macOS blocks first launch	Control-click the app, choose Open, and review the confirmation message.
An older build is open	Close the older NINZYA Calendar before launching 1.0.0.
